## PROJECTS

### Video Management System – Nov 2020 - Apr 2021

[http://ijariie.com/AdminUploadPdf/Video\\_Management\\_System\\_ijariie13467.pdf](http://ijariie.com/AdminUploadPdf/Video_Management_System_ijariie13467.pdf)

This is the website where we can achieve a learning by using video. Videos are very relevant for students as they can understand a concept very easily. In our daily traditional class, it is bit difficult to track every student progress but by using video management system we can overcome this problem. This website is built as a college project with a team of three people where my responsibilities included developing the frontend and managing the database.

### College Solutions – June 2023

This website is based on a HTML with CSS as a frontend language and PHP as backend language. Students face a huge problem to get the previous year's question papers and notes on the single platform, mostly the notes are circulated on WhatsApp or any kind of social networking website it gets very difficult to manage the important notes at the time of need. Students are unable to find previous year question papers and data related to their syllabus, this website can help the students and teachers to share the study related material easily.
